

SHOULD YOU BE CONCERNED?

These pictures were recently taken at a well-known public garden in Los Angeles. Both the avocado (left) and the Live Oak (right) have been attacked by an invasive ambrosia beetle/Fusarium complex. There are many additional tree species that are affected by this complex including other oak species, sycamores, persimmons and box elders.

Learn more about this threat to the southern California urban, agricultural and native landscape.

Attend the

Invasive Ambrosia Beetle Public Meeting – The Situation in California

August 14, 2012

2:00 – 5:00 P.M.

Marriott Hotel

3400 Market St., Riverside, CA

A 2.5 day science meeting will be held to discuss how to deal with this pest complex prior to the public meeting. The outcomes of this meeting and much more will be presented.

2.0 hours ISA CEU credits; DPR CEU credits pending.

Preregistration required. Contact Mary Lu Arpaia at mlarpaia@ucanr.edu or call 559-288-8507; if calling leave your full name and contact information. There is no registration fee but a \$4 charge for parking.

Meeting sponsored by:

UC Center for Invasive Pest Research, UC Riverside Departments of Entomology, Plant Pathology and Microbiology, Botany and Plant Sciences, UC Cooperative Extension, the Hofshi Foundation, the Los Angeles Arboretum, The Huntington Botanical Gardens and the California Avocado Commission
