

The California Department of Food and Agriculture and the Ministry of Economic Affairs in the Netherlands present a joint webinar on Climate Smart Agriculture on July 7, from 9am to 11am.

The webinar will provide perspective on the ability to produce crops in high-salinity conditions. Our saline agriculture experts include Arjen de Vos of Salt Farm Texel in the Netherlands, Don Cameron of Terranova Ranch in Central Valley, and several researchers from Wageningen UR and University of California.

The Climate Smart Agriculture webinar is the first in a series of online discussions on Climate Smart Agriculture.
